

BRAINSTORM & IDEA PRIORITIZATION

Ideation Phase — Concept Generation & Feasibility Matrix

DATE 29/09/26	TEAM ID SWTID-2026-8956	PROJECT NAME WeatherWise AI
TEAM SIZE 4	TEAM LEADER SANMATHI KUMAR	TEAM MEMBERS ARIFA ZOHRA, AINUL LIYANA P M, VAISHALI S

How Might We (HMW) Statement: How might we provide travelers with an intelligent, centralized weather platform that converts raw environmental metrics into personalized natural language activity and clothing recommendations?

Step 2: Idea Listing & Grouping Clusters

CLUSTER 1: AUTH & LOCATIONS - JWT authentication with bcrypt hashing. - MongoDB compound unique index preventing duplicate city bookmarks. - Public weather endpoint for non-registered users.	CLUSTER 2: AI ORCHESTRATION - Google Gemini AI SDK (@google/genai) integration. - Prompt engineering for context-aware clothing/activity advice. - Resilient fallback mode for key outages.	CLUSTER 3: SECURITY & ARCHITECTURE - Strict MVC architecture decoupling routes and models. - Parameter sanitization against XSS & NoSQL injection. - Centralized error handling and API health logs.
---	--	---

Step 3: Idea Prioritization Matrix

IDEA CONCEPT	IMPORTANCE	FEASIBILITY	PRIORITIZATION STATUS
JWT Auth & User/Location Schemas	High	High	Now (Core MVP)
Gemini AI Weather Recommendations	High	High	Now (Core MVP)
Resilient Fallback Mode & Parameter Sanitization	High	High	Now (Core MVP)
Public API Weather Endpoint (No-Auth)	Medium	High	Next Phase
Advanced Admin Health Monitoring Dashboard	Medium	Medium	Later Phase

Final Action Plan

The team will focus initial execution on the **High Importance / High Feasibility** core MVP: setting up the Express MVC architecture, MongoDB schemas with JWT middleware, and integrating Google Gemini AI to deliver actionable weather recommendations.
