Customer Problem Statement Template

FRAMEWORK ELEMENT	CUSTOMER PERSPECTIVE & ANALYSIS
I am	Alex, a travel enthusiast who frequently visits different cities and manages multi-destination itineraries.
I'm trying to	Effortlessly track local weather conditions and receive practical, personalized suggestions for outdoor activities and clothing choices.
But	Existing platforms display raw weather metrics without natural language explanations, require manual tracking of multiple cities, and lack personalized suggestions.
Because	Current systems lack centralized location management, intelligent AI synthesis of live environmental data, and cross-device security sync.
Which makes me feel	Frustrated, overwhelmed by raw technical metrics, and uncertain when making daily travel or clothing decisions.

Detailed Problem Statements (PS Breakdown)

PS-1: Fragmented Location & Preference Management

- Target User:** Frequent traveler managing multiple trip destinations.
- Goal:** Save, update, and manage a list of favorite cities securely across all devices.
- Barrier:** Absence of a secure, synchronized system to persist saved location preferences.
- Root Cause:** Traditional weather apps lack unified backend architecture and secure user account authentication.
- Impact:** Annoyed by repetitive city searching and lack of seamless synchronization.

PS-2: Lack of Intelligent & Actionable Weather Insights

- Target User:** Active outdoor explorer needing quick daily weather guidance.
- Goal:** Get direct clothing recommendations and activity suggestions tailored to real-time weather.
- Barrier:** Only receiving raw numerical data like humidity percentages, wind speed, and pressure.
- Root Cause:** Systems rely solely on standard API metric dumps without an AI orchestration layer.
- Impact:** Stressed and forced to manually interpret technical environmental metrics.

Proposed Solution Summary
